Overview

Data Governance

- Organizational BI vs Self-Service BI
- On-Prem vs Cloud

Where can you write DAX?

- Power Pivot
- Power BI
- SSAS Tabular
- Azure Analysis Services

“Data governance is a set of processes that ensures that important data assets are formally managed throughout the enterprise.”

Wikipedia

Data Governance is boring!
It's all about trade-offs.

Organizational Versus Self-Service

The Self-Service Litmus Test

Accounting

Needs to make her own reports

IT

Gatekeeper of the reports

Self-Service is often code for
“undermining IT authority”

Comparison of Benefits

Self-Service BI

Report authors closer to the business
(Theoretically) faster turnaround
(Potentially) more scalable

Organizational BI

Single source of truth
Less report bloat
Not all users are developers

On Premises Versus Cloud

What is the Cloud?

The cloud, originally, meant nothing

Computing as a commodity

Paying for managed infrastructure

Benefits of Going With the Cloud

**On-demand
capacity**

**Focus on core
competency**

**External
accessibility**

Downsides of Going With the Cloud

**Not always
cheaper**

**Data protection
laws**

Additional latency

The cloud is inevitable.

Cloud Computing: The Big Picture

Summary

Data Governance is all about trade-offs and processes

How much control is IT willing to give up?

Cloud adds flexibility and focus

Each tool for DAX is a different strategy
